

Fund the goods already on their way.

Exporters get paid the day their goods ship. Investors fund them from a bank account or a wallet.

Shipped today, paid months later.

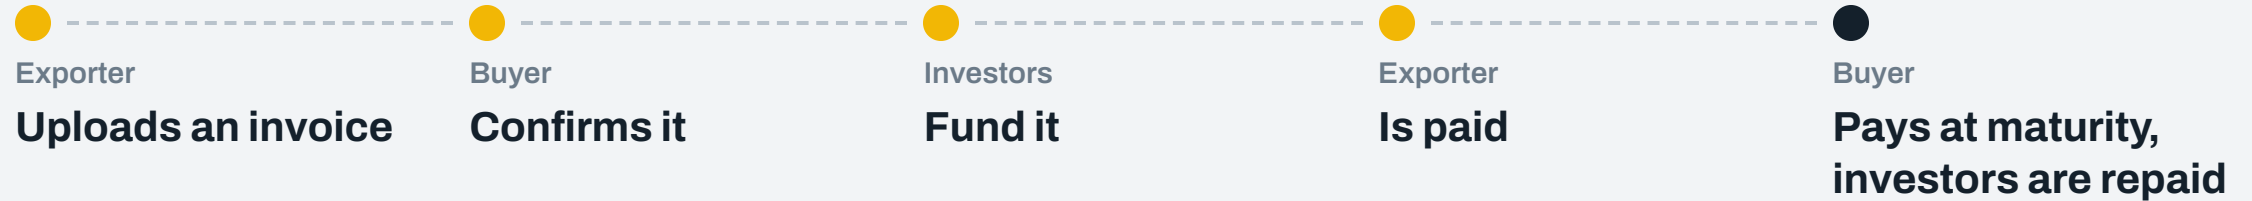

\$2.5 trillion

Global trade finance gap in 2022. Small exporters feel it most.

Source: Asian Development Bank, 2023 Trade Finance Gaps, Growth, and Jobs Survey.

Investors pay now, buyers pay later.

Exporters

Paid when the goods ship.

Investors

Short loans backed by confirmed documents.

Buyers

Same invoice, same payment terms.

One product, two sides.

Held for you by Tradeflow. Your loan

Investors: positions, returns, payouts and the marketplace.

How investors are protected.

- **The buyer confirms every document.** No document is financed twice.
- **Credit is reviewed privately.** Investors never see a business's financials.
- **Two independent sources confirm each repayment.**
- **Reserves are checked continuously.** A mismatch pauses funding.
- **Late loans lock the business** until it pays.

Funding paused: the bank booked money that never arrived.

Why onchain.

One loan, any money

Bank transfers and USDC fund the same loan and hold the same note.

Permissioned tokens

Each loan is an ERC-3643 token. Only verified investors can hold it.

Auditable

Listings, payouts, repayments and reserve checks are all onchain.

Automatic

Repayments settle, late loans lock and funding pauses on a reserve mismatch.

See it work.

Built in 36 hours.

- Runs end to end on **Ethereum Sepolia**: listing, funding, payout, repayment and late loans.
- **20 contract tests** and a **15-check end-to-end test**.
- Built on **Chainlink CRE**, **ERC-3643** and **Chainlink data feeds**.

github.com/Maadhav/tradeflow

The CRE flow, proven on Sepolia.

Workflow	Handler and trigger	What it decides	Sepolia tx
listing	verify-and-list HTTP, in a TEE	Private credit review, then lists the loan and deploys its ERC-3643 token	0x4a1e...ae10
lender	verify-lender HTTP	KYC, then registers the investor onchain	0xdc71...462b
	credit-fiat-deposit HTTP	Converts the deposit, checks the rate, mints notes	0x08b7...55a2
settlement	disburse-on-funded EVM log	Pays the business when funded	0x8839...ce44
	confirm-repayment HTTP	Two sources must agree on the payment	0x89f3...d77f
	redeem-fiat-lenders EVM log	Pays investors, burns their notes	0xb00c...d992
monitor	watch-and-reconcile Cron	Reconciles reserves, locks late loans	0x8564...ced8

```
$ cre workflow simulate listing --target sepolia ... --broadcast
✓ Workflow compiled
[SIMULATION] Running trigger trigger=http-trigger@1.0.0-alpha
```

Trigger requested TEE Execution:

AWS Nitro in us-west-2
During real execution, user logs for this trigger will not be visible, and will not leave the TEE.

```
[USER LOG] credit file received
[USER LOG] registry: document found, buyer confirmed
[USER LOG] sanctions screening: no match
[USER LOG] scorecard: grade A, approved
[USER LOG] EUR/USD 1.1270 from the data feed
[USER LOG] report delivered: tx=0x4a1e...ae10
[USER LOG] loan 1 listed with its own ERC-3643 token TFN1
✓ Workflow Simulation Result
```

Run 1. The credit file stays in the TEE; only the decision leaves.

An open network for trade credit.

- **More corridors:** emerging markets to Europe, the US and the Gulf.
- **Secondary market:** verified investors trade notes before maturity.
- **Distribution** through banks and fintechs.
- **Revenue:** a fee on every advance.
